SUMMARY

Full stack developer with a Data Science degree and about three years of professional technical work. At the São Paulo City Council I put an AI assistant into production on the Claude API, with retrieval over the internal database. Around it I work the whole stack, Angular and React on the front, Node.js and Express on the back, plus my own AWS CDK stack.

SKILLS

Front-End: Build and ship production single page applications and interactive interfaces. Angular and React day to day, TypeScript throughout.

Back-End & Database: REST APIs and async queues on Node.js and Express. Relational modelling and SQL, plus cache and queue operation in production.

Cloud & DevOps: Serverless applications on AWS, infrastructure as code and a CI/CD pipeline I wrote, deployed and maintain myself.

AI & LLM: LLM features in production: RAG, knowledge base and guardrail design, error rate measurement, structured evaluation of model output.

Data Science: Collection, cleaning and analysis, SQL against ERP data, dashboards and reporting for non-technical stakeholders.

WORK EXPERIENCE

Front-End Developer (Freelance) | Imsite — Remote

Jan 2026 – Present

- Built A Casa do Patrão, an interactive Three.js game for a Record TV and Walt Disney Company reality show launch event, contracted through an agency. A live ranking ran on the big screen and hundreds played it.
- Delivered two booking applications in production, Pega Horário for scheduling and Angra In App for boat trips, scoping each with the client and shipping it end to end.

Developer (Internship) | Rede Câmara, São Paulo City Council — Remote

Jan 2025 – Present

- Built and shipped an AI assistant into production inside a confidential internal management system. It runs on the Claude API with RAG over the internal database and interviews staff until it produces a complete service order.
- Wrote its knowledge base, business rules and explicit limits, which act as guardrails, then validated it across hundreds of test cases. Error rate sits at 3 to 4 percent, nearly all typos. Staff with no domain training now open service orders alone.
- Built the retrieval layer for a new platform's AI query feature. Context comes from structured queries, not embedding similarity, so answers are reproducible.
- Contribute to Influlens, an analytics platform unifying Instagram, Facebook and YouTube metrics through official APIs with OAuth 2.0, polled every five minutes (Node.js, Express, BullMQ, MySQL, Redis). Reports automated from a day to fifteen minutes.

RLHF Writer, AI Model Evaluator (Freelance) | Mercor — Remote, *Feb 2026 – Jun 2026*
United States

- Completed 300+ structured evaluations of AI model responses across all knowledge domains, reading Portuguese content and writing every report entirely in English for a US company.

Data Quality Technician | FormelD (AGCO) — Mogi das Cruzes, *Apr 2022 – Apr 2023*
Brazil

- Ran a full physical inventory of the quality warehouse and cross-referenced it against system records with SQL on the JD Edwards ERP, which exposed parts logged neither in quarantine nor in stock. Built the Power BI and Excel dashboards management acted on.
- Traced the cause to a missing component and arranged its shipment from the group plant in Germany, and the tractor transmission cases went back to the assembly line repaired. That recovered 500,000 BRL in parts marked for scrap, and the measures held savings at 150,000 BRL per month.

English Teacher | Nova Nett and CCBEU — Piedade and Sorocaba, *Aug 2014 – Mar 2020*
Brazil

- Taught students aged 5 to 73 and grew enrollment by 33 percent through monthly trial classes. Six years of daily English, where the C1 comes from.

SELECTED PROJECTS

- **Jobscope** (AWS Lambda, API Gateway, DynamoDB, S3, SQS with DLQ, CloudFront, AWS CDK, GitHub Actions, React, Gemini): job tracker that reads a posting and shows the skill gap against a CV. Whole stack in CDK, deployed through GitHub Actions with OIDC. Deployed and in use.
- **codocs** (Node.js, TypeScript, tree-sitter, Gemini): CLI that generates onboarding docs from a repository, module graph derived from the code, not from the model.
- **Fastin** (Kotlin, Jetpack Compose, Room, WorkManager): Android fasting tracker with no internet permission declared, so no health data leaves the device.
- **Race Game** (Three.js, Vite, Web Audio API, Canvas API): 1v1 browser racer with hand-written physics and procedural audio.
- **Tempo Jiggler** (Python 3, CustomTkinter, PyAutoGUI, NumPy): desktop app that prevents system inactivity, shipped as a packaged executable.
- **Moldura** (Next.js 16, React 19): web tool that adds borders for 15x10 photo printing.

EDUCATION

- Technologist Degree (CST) in Data Science, UNICID, Brazil. Completed December 2025.
- Data Analytics, Google (2023) · Deep Learning for Business, Yonsei (2023) · Cyber Threat Management, Cisco (2025)

LANGUAGES

- English: C1 · Portuguese: Native · Spanish: B1 · Remote, available as a contractor
